NO. 1

Alfred L. Frechette, M.D., M.P.H.

COMMISSIONER

The Commonwealth of Massachusetts

Department of Public Health

600 Washington Street

Boston 02111

February, 1983

To the Honorable Senate and
House of Representatives

I have the honor to submit herewith, as required by Chapter 111, Section 2 of the General Laws, the one hundred and thirty-ninth annual report on statistics of births, deaths, fetal deaths, abortions, marriages, and divorces in Massachusetts for the calendar year 1980.

This is the seventeenth Annual Report of Vital Statistics published by the Department of Public Health, and is intended for administrative and research purposes connected with health programs and population studies.

Respectfully submitted,

A handwritten signature in cursive script that reads "Alfred L. Frechette".

Alfred L. Frechette, M.D., M.P.H.
Commissioner

THE COMMONWEALTH OF MASSACHUSETTS

DEPARTMENT OF PUBLIC HEALTH

Michael S. Dukakis, Governor
Manuel Carballo, Secretary, Executive Office of Human Services
Alfred L. Frechette, M.D., M.P.H., Commissioner, Department of
Public Health

ANNUAL REPORT
VITAL STATISTICS OF MASSACHUSETTS

Prepared by the

Massachusetts Department of Public Health
Division of Health Statistics and Research
Registry of Vital Records and Statistics
Room 107, McCormack Building
1 Ashburton Place
Boston, Massachusetts 02108

FOREWORD

This is the 139th Annual Report of Vital Statistics and the 17th prepared by the Department of Public Health. It tabulates Massachusetts births, deaths, fetal deaths, induced abortions, marriages and divorces occurring in the 1980 calendar year. This report is produced under the provisions of Section 2, Chapter 111 of the Massachusetts General Laws.

Statistics presented in this report are based primarily on resident data; however, marriage, divorce and abortion data reflect occurrences of these events within the Commonwealth. Statistics for deaths certified by medical examiners are also based on occurrence.

It is hoped that this report will be useful to a wide range of health data users in the Commonwealth. Questions concerning these data and requests for more detailed findings should be directed to the Massachusetts Department of Public Health, Division of Health Statistics and Research, Room 335, 80 Boylston Street, Boston, Massachusetts 02116, (617)727-2977.

VITAL EVENTS

During 1980 there were 72,591 births and 54,935 deaths to residents of Massachusetts. Births increased 2.9% over 1979 (70,568) and reflect a rate of 12.7 per 1,000 population, somewhat lower than the national rate of 16.2. Deaths increased (3,138) from 1979, resulting in a rate of 9.6 per 1,000 population, higher than the national rate of 8.9 per 1,000 population.

Although the total number of deaths increased this year, there were fewer infant and neonatal deaths (748 and 550, respectively) this year. The rates (10.3 for infant deaths and 7.6 for neonatal deaths) are the lowest ever recorded in Massachusetts.

Fetal deaths reported in 1980 increased 20.8% to 574. There was a slight decrease in the number of induced abortions reported for 1980 (43,948) as compared with the 44,044 reported in 1979.

Marriages in Massachusetts increased 2.8% in 1980, but reflect a rate of 8.1 per 1,000 lower than the national rate of 10.9. The divorce rate (3.1 per 1,000 population) remained very nearly the same as in 1979 and continued to be much lower than the rate of 5.3 per 1,000 population for the nation.

Tables in this section present breakdowns of vital events by month and location, as well as an historical comparison of natural increase rates in Massachusetts. Detailed statistics reflecting each specific type of event are displayed in succeeding sections of this report.

TABLE 1
SUMMARY OF 1980 VITAL EVENTS

The vital events involving Massachusetts residents in 1980 and 1979 compare as follows:

	<u>1980</u>	<u>1979</u>	<u>Per Cent Change</u>
Live Births	72,591	70,568	+2.9
Fetal Deaths	574	475	+20.8
Infant Deaths	748	760	-1.6
Neonatal Deaths	550	564	-2.5
Total Deaths	54,935	51,797	+6.1
<hr style="border-top: 1px dashed black;"/>			
Marriages	46,273	45,010	+2.8
Divorces	17,873	17,523	+1.9
Abortions	43,948	44,044	- .2

Note: Total deaths include infant deaths and neonatal deaths but do not include fetal deaths. Figures for marriages, divorces and abortions reflect occurrence, not residence.

MASSACHUSETTS VITAL EVENTS

Each day in Massachusetts, there are approximately:

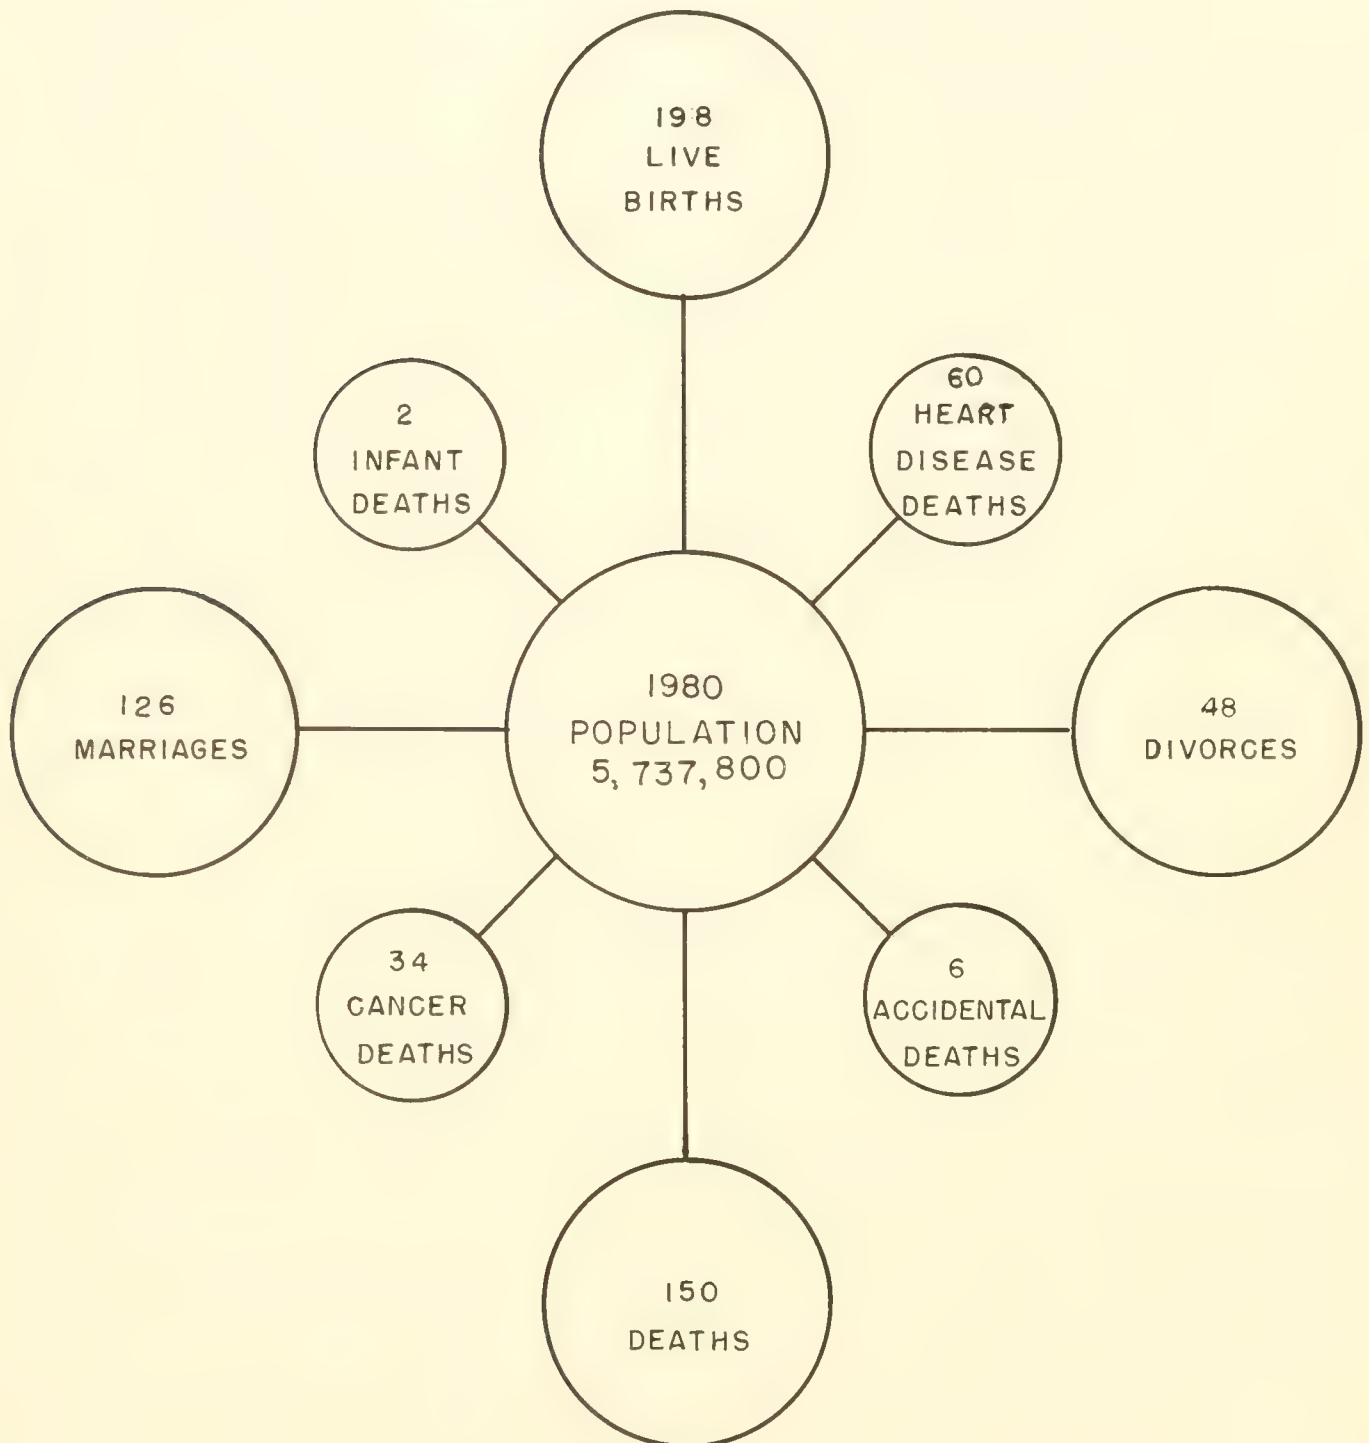

TABLE 2

NATALITY

Massachusetts resident births increased in 1980 to 72,591, 2.9% more than the 70,568 recorded in 1979. Male births accounted for 51.2% of total resident births, and 6.1% of all births were of immature birth weight (2500 grams or less). Approximately 2% of all births were multiple births.

Teenage mothers accounted for 7,765 births, 10.7% of all births. Both the number and percent of teenage births continued to decline in Massachusetts. Although there is continuing interest in birthing centers and in at-home births, less than .6% of all births occurred in other than a hospital setting.

There were 61,156 babies born to married mothers; 11,435 babies were born to unwed mothers, representing 15.6% of total births and reflecting an increase of 69% since 1970. There were 32,858 babies born (45.2%) who were the first born to their mothers.

The Massachusetts fertility rate (births per 1,000 women of childbearing age) was 53.5, again well below the U.S. rate of 69.2. There were important differences in fertility rates for the various female age groups. The highest age-specific fertility rate was found in the 25-29 year-old age group (99.9), followed by the 20-24 year-old age group (76.2). All age groups showed slight increases in fertility rates from 1979, except for the oldest group (40-44 year-olds) which remained nearly the same.

MORTALITY

There were 54,935 Massachusetts resident deaths in 1980, 3,138 more than in 1979. Heart disease continued as the leading cause of death, accounting for 39.9% of all deaths. Cancer (22.3%), cerebrovascular disease (7.9%), influenza and pneumonia (4.0%), and accidents (4.0%) are the next leading causes of death. Both heart disease and cancer account for a slightly higher percentage of deaths in Massachusetts than in the nation as a whole. The percentage of deaths due to cancer has risen by nearly 4% in Massachusetts since 1970.

The leading cause of death varies by age. Non-motor vehicle accidents are the leading cause of death for the 1-14 year olds; motor vehicle accidents for the 15-34 year-olds; cancer for the 35-64 year-olds; and ischemic heart disease for the 65+ group. Death rates for specific diseases also vary according to sex and race.

Death statistics presented by cause of death in this report are based on death certificates coded for cause of death using the Ninth Revision of the International Classification of Diseases, World Health Organization. When using these data for comparisons over time, care should be taken to identify which revision was in use during the time period the data were collected. In the tables in this section, the numbers following the causes of death reflect the I.C.D.-9 code numbers for these causes.

In, 1980 a new method of coding causes of death was implemented called ACME (Automated Classification of Medical Entities), in which every disease or condition mentioned on the death certificates is

coded. This system of coding permits deaths to be classified by underlying cause as in the past and also permits production of multiple cause data.

Effective January 1, 1980, a revised certificate of death was introduced in Massachusetts, combining the medical examiner certificate and the standard certificate into one form. A handbook for physicians, medical examiners and funeral directors was developed and distributed in order to better implement this new form.

INFANT AND NEONATAL MORTALITY

In 1980, the infant and neonatal death rates continued to decline. The rate for neonatal deaths decreased to 7.6 per 1,000 live births and the infant death rate was 10.3 per 1,000 live births, both the lowest rates ever recorded in Massachusetts. These rates are lower than the U.S. rates of 8.4 and 12.5 per 1,000 live births, respectively.

The majority (55.5%) of neonatal deaths occurred in babies under 1 day old. Deaths to babies under one week old constituted 83.8% of all neonatal deaths. Neonatal deaths represented 73.5% of infant deaths.

Of the 550 neonatal deaths, 69% were due to Certain Conditions Originating in the Perinatal Period (760-779) and 22% were due to Congenital Anomalies (740-759). Of the 198 deaths to infants more than 27 days old but less than one year, 31% were due to Sudden Infant Death Syndrome (7890) and 26% were due to Congenital Anomalies (740-759).

Neonatal mortality is strongly related to birth weight. Low birth weight babies (under 2500 grams or 5 pounds 8 ounces) accounted for 6.1% of all live births in 1980, but 73.1% of neonatal deaths were of low birth weight babies.

TABLE 22

1980	413	4,489	92.0	118	68,245	1.7	565	74,251	7.6

1. The figures used in this table can not be directly compared with other tables in this section. They are derived from those neonatal deaths where both births and death certificates are available (and hence may exclude out-of-state births or deaths). Neonatal deaths include deaths occurring less than 28 days after birth and therefore include some deaths thru January of the subsequent year. Births are based on Massachusetts occurrence births. These mortality trends are as comprehensive as it is possible to develop, based upon available vital events data.
2. All birthweights include some births and neonatal deaths of unknown weight and all weights over 4500 grams.

INDUCED ABORTIONS

The Department of Public Health is authorized to collect abortion statistics under chapter 111, Section 25A of the Massachusetts General Laws. There were 43,948 induced abortions reported during 1980, a decrease of less than 100 over the total of 44,044 in 1979. The ratio of abortions to live births was 592 per 1,000 births, slightly less than 6 abortions for every 10 live births.

Over half (55.8%) of induced abortions were performed on women between the ages of 20 and 29. Women under the age of 20 accounted for 30% of all induced abortions. The ratio of abortions to births is highest for women under 20 and those 40 years of age and older, with both groups having more abortions than births.

MARRIAGES AND DIVORCES

Marriages and divorces are reported by the place of occurrence in Massachusetts and not by the residence of the parties involved. Marriages and divorces which involve Massachusetts residents but occur in other states are not included in these figures. There is no system of interstate information exchange for these events as there is for births and deaths.

There were 46,273 marriages performed in the Commonwealth during 1980, an increase of 1,263 (2.8%) over the 1979 figure, resulting in a rate of 8.1 per 1,000 population. Of the brides, 76.4% had never been married before, 2.9% were widowed and 20.6% were previously divorced. The previous marital status of grooms was similar. People under the age of twenty accounted for 13.8% of the brides and 4.8% of the grooms.

There were 17,873 divorces granted in Massachusetts in 1980, nearly the same number as the 17,524 granted during 1979. The rate per 1,000 population has increased from 1.9 in 1970 to 3.1 in 1980.

POPULATION

The population tables presented in this section are based on the federal census for decennial years (1970 and 1980). For the inter-censal years (1955, 1965, and 1975), the Commonwealth enumerated its own census. The Commonwealth's figures are presented in the county population table for inter-censal years, while the U.S. Census Bureau figures are presented by city or town for 1970 and 1980.

It is worth noting that the state's definition of who is to be counted as a Massachusetts resident differs slightly from the federal definition. Generally, the state figures exclude students and military families residing in the Commonwealth.

APPENDIX 1

REGISTRATION OF VITAL RECORDS

The data in this report is compiled by the Registry of Vital Records and Statistics, a unit of the Division of Health Statistics and Research in the Department of Public Health.

Returns of births, marriages and death records are received in the Registry from the Commonwealth's 351 local municipalities (312 Towns and 39 Cities). Except for the City of Boston which has a City Registrar, the town or city clerk for each respective community serves as local registrar. Monthly, each local registrar transmits attested copies which make up the state file. These events have been filed in the Registry since 1841.

When a birth occurs at a hospital, the certificate is prepared by hospital personnel and transmitted to the local registrar within 10 days. For births which occur at home or without medical assistance, the parents are responsible for the registration. All birth records are signed by the attending physician and the parent to insure the accuracy of the data collected.

Marriage licenses are issued by the clerk of the city or town. The person performing the marriage is required to complete the certificate and return it to the local clerk who issued the license.

A death certificate is initiated immediately after the death by the physician or medical examiner who records the deceased's name and complete cause of death. The remainder of the data is collected by the funeral director with the assistance of the informant, usually the next of kin. The funeral director then submits the completed certificate to the local board of health who issues the appropriate burial permit and further transmits the certificate to the local clerk.

Fetal deaths of 20 weeks or more gestation are required to be

reported by the hospital where the death occurred, within ten days after death.

Summary reports of abortion are received monthly from Massachusetts facilities.

Divorce reports are received monthly from the Registrars of Probate for the county in which the divorce was granted.

Note: Confidential section is detached from record and is not maintained in public file.

DEFINITION:

"Fetal death" per chapter 111 section 202 of the M.G.L. means death prior to the complete expulsion or extraction from its mother of a fetus, irrespective of the duration of pregnancy, as indicated by the fact that after such expulsion or extraction the fetus does not breathe or show any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles. A fetal death does NOT include an induced abortion as defined in section 12K of chapter 112 of M.G.L. . Spontaneous abortions are to be included.

TO BE REPORTED:

Only fetal deaths of twenty weeks or more gestation or of a weight of 350 grams or more are to be reported.

INSTRUCTIONS:

Return completed reported within 10 days to the Registry of Vital Records and Statistics, Rm. 107 McCormack Bldg., 1 Ashburton Pl., Boston, Ma. 02108

THIS CERTIFICATE IS NOT TO BE USED OUTSIDE OF MASSACHUSETTS.

THIS IS A PERMANENT RECORD. Use only durable black ink or approved black typewriter ribbon. Every item of information should be carefully supplied. ALTERATIONS AND ERASURES IN THIS CERTIFICATE ARE FORBIDDEN. PENALTY FOR VIOLATION, ONE HUNDRED DOLLARS
SEE CHAP. 207, §§ 28, 28A, 48, 49, 54, 57 and CHAP. 46, § 18

APPENDIX 11

DEFINITIONS

The following definitions conform wherever possible to those of the National Center for Health Statistics, United States Department of Health, and Human Services.

BIRTHS

LIVE BIRTH - A live birth is the complete expulsion or extraction from its mother of a product of conception, regardless of the duration of pregnancy, which, after separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles.

BIRTH WEIGHT - Weight of an infant or fetus at the time of delivery. It may be recorded in either pounds/ounces or grams; if it is the former, it is converted to grams for use in this report.

MATURE BIRTH WEIGHT - Weight at delivery which equals or exceeds 2501 grams.

IMMATURE BIRTH WEIGHT - Weight at delivery of 2500 grams or less. Immaturity rather than prematurity is used. Prematurity refers to gestational age and is difficult to ascertain reliably.

DEATHS

INFANT DEATH - Death of a person whose age is less than one year.

NEONATAL DEATH - Death of a person whose age is less than 28 days.

FETAL DEATH - A fetal death is death prior to the complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of pregnancy; the death is indicated by the fact that after such separation the fetus does not breathe or show any other evidence of life, such as the beating of the heart, pulsation of the umbilical cord, or definite movement of the voluntary muscles.

Massachusetts law requires that fetal deaths of 20 or more weeks gestation be recorded; therefore, the fetal deaths referred to in this report are of that gestational age. In this report use is made of infant, neonatal and fetal deaths occurring to Massachusetts residents.

CAUSE OF DEATH - The underlying condition which gives rise to a series of events leading to death. The code used for identifying cause of death is the 9th Edition of the International Classification of Disease, and the rules for applying the code are promulgated by the National Center for Health Statistics.

DEMOGRAPHIC

HEALTH SERVICE AREA - In accordance with the National Health Planning and Resources Development Act of 1974 (P.L. 93-641), Massachusetts is divided into six Health Service Areas (HSA's) for the purpose of planning and developing health services. Each HSA encompasses both metropolitan and non-metropolitan areas and contains at least one center for the provision of highly specialized health services.

HEALTH SYSTEMS AGENCY - A Health Systems Agency (HSA) is the public planning body which is responsible for the establishment and implementation of a comprehensive health systems plan within a particular service area. The purpose of the comprehensive plan is to improve the health of HSA residents, increase accessibility and quality of health services, restrain cost increase and prevent unnecessary duplication of health resources. The executive committee of the agency is composed both of consumers and providers of health care, with the consumers forming the majority. The consumer membership of the committee is chosen to be broadly representative of the social, economic, linguistic and racial populations, geographic areas of the HSA, and major purchasers of health care.

OCCURRENCE - The place where the event actually happened. In Massachusetts, place will be one of 351 towns/cities.

RACE - The mother's response to the question of her own and her husband's racial identity. The race of the baby is determined by consideration of the race (s) of the parents on the birth record. The response of the informant for a death record.

RESIDENCE - The usual place of residence as reported by the mother (for births) or the informant (for deaths). An infant's residence is considered that of its mother.

RATES

$$\text{BIRTH RATE} = \frac{\text{No. of Resident Live Births} \times 1,000}{\text{Total Resident Population}}$$

$$\text{GENERAL FERTILITY RATE} = \frac{\text{No. of Live Births} \times 1,000}{\text{Total Female Population of childbearing Age (15-44)}}$$

$$\text{AGE-SPECIFIC FERTILITY RATE} = \frac{\text{No. of Resident Live Births for a Specific Age of Mother} \times 1,000}{\text{Total Female Population of Specific Age}}$$

$$\text{MORTALITY RATE} = \frac{\text{No. of Resident Deaths} \times 1,000}{\text{Total Resident Population}}$$

$$\text{FETAL MORTALITY RATE} = \frac{\text{No. of Resident Fetal Deaths} \times 1,000}{\text{Total Resident Live Births and Resident Fetal Deaths}}$$

$$\text{INFANT MORTALITY RATE} = \frac{\text{No. of Deaths at less than 1 Year of Age} \times 1,000}{\text{Total Resident Live Births}}$$

$$\text{NEONATAL MORTALITY RATE} = \frac{\text{No. of Deaths at less than 28 Days of Age} \times 1,000}{\text{Total Resident Live Births}}$$

$$\text{AGE-SPECIFIC DEATH RATE} = \frac{\text{No. of Deaths in Specific Age Group} \times 100,000}{\text{Total Resident Population in Specific Age Group}}$$

$$\text{CAUSE-SPECIFIC DEATH RATE} = \frac{\text{No. of Deaths from Specific Cause} \times 100,000}{\text{Total Resident Population}}$$
